

The Power of Proprietary Proliferative Lipopeptides

Prolifersyn®, a Key AGERA® Proliferative Lipopeptide: A Powerful Component for Anti-Aging Skincare

Prolifersyn®, a proliferative mimetic Lipopeptide complex, designed for cellular stimulation without invasion or trauma to offer the most effective proliferative therapy for keratinocytes and mature fibroblasts.

Promoting More Youthful Looking Skin— Proliferative Lipopeptides Make the Difference

- As skin ages, production of collagen and other essential skin-building structures declines
- Proliferative Lipopeptides are designed to penetrate deep into the skin and help control the decline of skin-building structures (the aging process)
- The Proliferative Lipopeptide Complex (Prolifersyn®) in AGERA® skincare products help facilitate dermal stimulation
- Stimulating the skin cells to produce new collagen and elastin can result in firmer, thicker, younger-looking skin

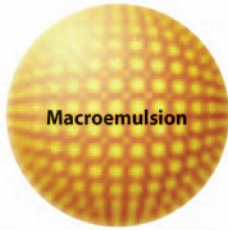

Visible Results Without Irritation— Results of AGERA® Proliferative Lipopeptides

- Collagen production stimulation occurs when fibroblast cells within the skin are activated by proliferative peptides
- More youthful skin appearance results from thicker, healthier skin, a function of increased collagen and elastin
- Results have been validated through sophisticated laboratory-based human cell culture studies

Nanoemulsion technology™

Visible Results Without Irritation

AGERA® Laboratories has developed a wide range of scientifically designed products formulated to penetrate the skin and activate its healing potential.

- **Specially manufactured nanoemulsion and nanoparticles** allow powerful ingredients to penetrate and promote healthy skin
- **Proprietary proliferative Lipopeptides** developed to help stimulate collagen and elastin for firmer, younger-looking skin
- **Powerful antioxidants** combat free radical damage for smoother, softer skin
- **Retinol** penetrates the skin to help reverse the appearance of fine lines and wrinkles and reveal new radiance
